

Project Execution :

- 1) Install requirements.txt file in your machine
- 2) Run “ python main.py” or “python3 main.py”
- 3) Once main file will execute , it will ask you to provide the image path .
- 4) If database is empty then first you have to insert details before .
- 5) If the face is already recorded in database , it will show you the image and their details .
- 6) If the face will be new , it will show you the image and ask if you want to insert their details or not .
- 7) It can identify multiple faces in a single group images.
- 8) Accuracy will be between 85-87%
